CENTERING

Front and back appear well aligned overall, with slight apparent border variation. Camera perspective prevents a calibrated centering ratio.

CORNERS

Front and back corners appear sharp. A targeted bottom-right back-corner view shows a square tip with no clear chip, bend, or fraying; the earlier suspected irregularity is not confirmed damage.

EDGES

No clearly identifiable major edge chip or separation in the submitted close-ups. Small bright spots are not confirmed wear.

SURFACE

No confirmed surface defect requiring a deduction in the submitted views. The curved thigh line appears to be a pants seam in the printed photograph. Glare limits detection of fine scratches and dimples.

ASSESSMENT LIMITS

This finalizes a 10 Gem Mint image-based condition opinion with moderate confidence. Unresolved marks are not confirmed defects. Photographs cannot establish authenticity or reveal every hidden scratch, dimple, or alteration. No in-hand inspection was performed, and another grader may reach a different result.
